

# How to view a closed Database

---

Once a database closes, you cannot make any changes. You can, however, view the database page until the order has been delivered. Here's how to do so:

- From the menu on the left side of the website, click on Orders

- On the Order page, find the Database you are interested in viewing and click on the name of the database. You will notice your mouse pointer turning into a hand, showing the link is active.

Open Orders

Please note: once you place your order, it will take three or four minutes to show up on the database. In addition, I found that you must go to a different page and come back to see your order on the database.

There is a scroll bar at the bottom of the database to scroll to the right. Once you scroll to the right there will also be an up-and-down scroll bar.

**Important Note:** You may edit your order as long as the database is open. Please be very careful to edit your order and not one else's.

<p>Closed:</p>  <p><a href="#">Happy Tails- CLOSED</a></p>	<p>Closed:</p>  <p><a href="#">Plymouth Poultry- CLOSED</a></p>	<p>Currently OPEN</p>  <p><a href="#">Buffalo Treats</a></p>	<p>Currently OPEN</p>  <p><a href="#">Sardines</a></p>
---	--	--	--

- Note that you cannot click on the word "CLOSED" as this is not part of the link. Only click on the name of the database
- Once you click, you will be taken to the actual order page for the product. Please allow time for the database to load. You can view prices and what you ordered from here.
